MAC Assignments as of October 26, 2022

GAF equation: $(0.50238 * \text{work GPCI}) + (0.45593 * \text{PE GPCI}) + (0.04169 * \text{MP GPCI})$.

Note: In previous updates the weights used to calculate GAF were based on MEI shares published by CMS.

Beginning with the CY2023 update, the weights used to calculate the GAF reflect the share of total RVUs each component (i.e. work, PE, and MP) accounts for, based on actual Medicare utilization.

*GAF reflects a 1.5 work GPCI floor in Alaska established by the MIPPA.

**GAF reflects a 1.0 PE GPCI floor for frontier states established by the Affordable Care Act.

Note: The 1.0 Work GPCI floor required by Section 101 of the Consolidated Appropriations Act, 2021 [December 27, 2020] extended the Work GPCI floor through December 31, 2023.

Therefore, the GAFs for 2023 reflect the 1.0 Work GPCI floor, and the GAFs for 2024 do not reflect a 1.0 Work GPCI floor.

Note: For CY 2024 and on, Addendum D will reflect the retirement of 3 California localities, as finalized in the CY 2023 PFS final rule.
